

TITLE OF THE INVENTION

A rubber composition used for a rubber stopper for a medicament or
for a medical treatment or its crosslinked product

ABSTRACT OF THE DISCLOSURE

The object of the invention is to provide a rubber composition or its
crosslinked product used for a rubber stopper for a medicament or a rubber
article for a medical treatment, suitable for radiation treatments to be carried
out for the purpose of sterilizing.

Accordingly, the present invention provides a rubber composition or its
crosslinked product used for a rubber stopper for a medicament or a rubber
article for a medical treatment, comprising an isobutylene copolymer, as a pre-
dominant component, with a density of at most 0.95, capable of being readily
subjected to a radiation treatment.
